新产品1:

这种压印加强的五爪有助于提高抗弯能力，增强破坏力；在同等厚度材料条件下，新型有带五爪的破坏力提高30%上。

The ring with punch and ribbed can increase the bending strength and destructive power. With the same thickness material, the new type ring with destructive power would be increased more than 30%.

新产品2:

这种增加硬度之后的钮珠和介子，是同样的原理。改良前的硬度为75-90度之间，新产品将硬度增加到135度，大大提高产品对五爪的抗冲击力而不会忍爪让，更加不会因受到撞击而变形，而且硬度增加后，弹弓的反弹力增强，耐用性增加。

The same principle use in the stud and socket which is to strengthen the hardness. Before the improvement, the product's hardness between 75° to 90°. The new product's hardness will be increased to 135°, greatly improve the product of ring's impact and have no foot prints, also can't change the shape due to the impact. After increase the hardness, elastic resilience and durability had been increased.
